

FOR IMMEDIATE RELEASE

BESSEY®: NEW Auto-Adjust Toggle Clamps

July 1, 2013 - BESSEY announces an extension of the Auto-Adjust Toggle Clamp line from three to eight distinct configurations.

The original BESSEY range of Auto-Adjust Toggle Clamps included two horizontal clamps and one inline toggle clamp - each with a horizontal base plate. This offering has now been expanded with the addition of five further models. Included in this expansion are three additional horizontal toggle clamps in a more compact format, one of which has a horizontal base plate, one with a vertical base plate and one with a 90° angled base plate. The inline clamp range has also been expanded with two compact models: one model with a horizontal base plate and one with a 90° angled base plate.

The new Auto-Adjust Toggle clamps also include detailing improvements. For example, the opening angle is now a full 90°. The oil-resistant two-component plastic grip is relatively larger on the more compact models and incorporates an anti-slide device and lever stop. Additional features are the rotating pressure plate with removable protective cap (instead of a screw with a rubber stopper) and a very flexible base plate hole pattern that is suitable for standard dimensioning in millimeters and inches.

All models - new and old – continue to feature the ability to automatically adjust to work piece dimensions while maintaining constant clamping force and, with the ability to adjust that clamping force as needed at set-up time. Time-consuming manual adjustment of the pressure screw is greatly reduced.

BESSEY® has been a market leader in clamps since 1936. If you know clamps, you know BESSEY®. You know our reputation for quality and reliability; you know we're 130 years of German engineering backed by the strength of our product and our reputation. BESSEY®. Simply better.
